

Abstract

This invention relates to a shoe with hygienic fixture, more
5 particularly to a shoe with heel having ventilation device in its
sole. The invention is characterized by that the vent-slots on the
sole piece gather together near the center of toes transverse line
on the sole piece, and a convex air-gathering pipeline is disposed
between the gather point and the air intake check valve. The purpose
10 of the invention is to design a ventilated shoe, which can increase
ventilating quantity and keep good ventilation effect. Compared with
the prior art, the advantages of the present invention are large
ventilating quantity, longer using life, and no air leaking when
using.
